

100 Days of Python

Day 19 — Practice Assignment: The continue Statement in Python

1. Using a for loop with range(1, 11), print all numbers from 1 to 10 except 5 — skip printing 5 using continue.

2. Using a for loop, go through the list numbers = [4, 7, 12, 15, 8, 21, 6] and print only the even numbers, skipping the odd ones with continue.

Hint: Use if num % 2 != 0: continue to skip odd numbers before the print() line.

3. Using a while loop, print numbers from 1 to 10, but skip printing any number that is a multiple of 3.

4. You are building a simple travel planner. You have a list of cities with their weather status: cities = [("Jaipur", "Clear"), ("Udaipur", "Rainy"), ("Jodhpur", "Clear"), ("Mumbai", "Rainy"), ("Goa", "Clear")]. Using a for loop, print only the cities with "Clear" weather as good places to visit, skipping the "Rainy" ones with continue.

Hint: Loop with for city, weather in cities, and use if weather == "Rainy": continue before printing.
