

100 Days of Python

Day 9 — Practice Assignment: Logical Operators in Python

1. Take `age = 22` and `has_id = True`. Using `and`, check whether the person is at least 18 AND has an ID, then print the result.

2. You are building a simple movie ticket checker. A person can watch a movie if they are 18 or older, OR if they are accompanied by a parent (`has_parent = True`). Take `age = 15` and `has_parent = True`, and print whether they can watch the movie.

3. Take `is_raining = True`. Using `not`, print whether it is a good day for a picnic (a good day means it is NOT raining).

Hint: not simply flips True to False and False to True.

4. You are building a simple travel planner. A trip is confirmed only if the budget is sufficient (`budget_ok = True`), the dates are available (`dates_ok = True`), and the weather is NOT bad (`weather_bad = False`). Combine `and`, `and not` into a single condition and print whether the trip is confirmed.

Hint: Try something like: `budget_ok and dates_ok and not weather_bad`
