

100 Days of Python

Day 10 — Practice Assignment: The if Statement in Python

Note: Use only the if statement for all questions below — do not use else or elif.

- 1. Take marks = 40. Write an if statement that prints "You passed!" only if marks is greater than or equal to 33.**
- 2. You are building a simple movie ticket checker. Take age = 20. Write an if statement that prints "Ticket allowed" only if age is 18 or above.**
- 3. Take temperature = 40. Write an if statement that prints "Stay hydrated!" only if the temperature is above 35.**
- 4. You are building a simple travel planner. Take budget = 6000 and trip_cost = 5500. Write an if statement that prints "Trip is affordable, you can book it!" only if the budget is greater than or equal to the trip cost. Also print the remaining balance inside the same if block.**

Hint: You can have more than one print() statement inside a single if block, as long as both are indented the same amount.
