

100 Days of Python

Day 11 — Practice Assignment: if-else in Python

Note: Use only if and else for all questions below — do not use elif.

1. Take marks = 28. Write an if-else statement that prints "You passed!" if marks is greater than or equal to 33, otherwise prints "You failed!"

2. You are building a simple movie ticket checker. Take age = 15. Write an if-else statement that prints "Ticket allowed" if age is 18 or above, otherwise prints "Ticket not allowed"

3. Take a number, num = 17. Write an if-else statement that prints "Even" if the number is divisible by 2, otherwise prints "Odd"

Hint: Use the modulus operator % to check divisibility — num % 2 == 0 means it's even.

4. You are building a simple travel planner. Take budget = 4000 and trip_cost = 4800. Write an if-else statement that prints "Trip is affordable, you can book it!" if the budget covers the trip cost, otherwise prints "Trip is over budget, you need Rs. X more" showing exactly how much extra money is needed.

Hint: In the else block, calculate the shortfall as trip_cost - budget and include it in the printed message using an f-string.
