

100 Days of Python

Day 12 — Practice Assignment: if–elif–else in Python

1. Take marks = 72. Using if-elif-else, print the grade based on these rules: 90 or above → "A", 75 to 89 → "B", 33 to 74 → "C", below 33 → "Fail"

2. You are building a simple movie ticket pricing system. Take age = 8. Using if-elif-else, print the ticket price: age below 5 → "Free", age 5 to 12 → "Rs. 100", age 13 to 59 → "Rs. 250", age 60 and above → "Rs. 120"

Hint: Order your conditions from smallest to largest range, and check each age boundary carefully with <= and >=.

3. Take a number, num = 0. Using if-elif-else, print "Positive", "Negative", or "Zero" depending on the value of num.

4. You are building a simple travel planner. Take budget = 15000. Using if-elif-else, print the travel package the user can afford: budget above 20000 → "Luxury Package", budget 10000 to 20000 → "Standard Package", budget 5000 to 9999 → "Budget Package", below 5000 → "Not enough budget to travel"

Hint: Start checking from the highest budget range downward, so each elif only needs one comparison.
