

100 Days of Python

Day 33 — Practice Assignment: List Traversal

1. Given `animals = ["cat", "dog", "fox"]`, use a basic for loop to print each animal on its own line.
2. Given `prices = [250, 400, 150]`, loop over the list using `range(len())` and print each index alongside its price, like `"0: 250"`.
3. Given `tasks = ["Buy milk", "Walk dog", "Read book"]`, use `enumerate()` starting the count at 1 to print each task as `"1. Buy milk"`, `"2. Walk dog"`, and so on.
4. Given `nums = [3, 8, 12, 5, 20, 7]`, loop over the list once and build a new list called `big_nums` containing only the values greater than 10 — without modifying `nums` itself. Print `big_nums` at the end.

Hint: Start with `big_nums = []`, loop over `nums` with a basic for loop, and use an if check with `.append()` to add only the values greater than 10.
