

100 Days of Python

Day 2 — Practice Assignment: Variables in Python

1. Create variables to store your name, age, and city, then print them in a single sentence, e.g. "My name is Ada, I am 25 years old, and I live in Delhi."

2. You have two variables: `a = 5` and `b = 10`. Swap their values without using a third variable, then print both.

Hint: Try using tuple assignment — `a, b = b, a`
