

100 Days of Python

Day 4 — Practice Assignment: Input & Output in Python

- 1. Write a program that asks the user for their name and favorite color using `input()`, then prints "Hello <name>, <color> is a great choice!"**
- 2. Ask the user to enter two numbers using `input()`, convert them to the correct type, and print their sum, difference, and product — each on its own line with a label.**

Hint: `input()` always returns a string, so convert it with `int()` or `float()` before doing any math.
