

100 Days of Python

Day 20 — Practice Assignment: Nested Loops in Python

1. Using a nested for loop, print a 3x3 grid of stars (*), with 3 stars printed on each of 3 rows.

Hint: The outer loop controls the rows (3 times), and the inner loop controls how many stars are printed per row.

2. Using a nested for loop, print the multiplication tables of 2, 3, and 4 — one after another, from 1 to 5 for each table.

3. Using a nested for loop, print a number pattern like this:

```
1
1 2
1 2 3
1 2 3 4
```

Hint: The outer loop controls the row number, and the inner loop should run from 1 up to that row number.

4. You are building a simple travel planner. You have two lists: cities = ["Jaipur", "Udaipur"] and activities = ["Sightseeing", "Shopping", "Food Tour"]. Using a nested for loop, print every combination of city and activity, e.g. "Jaipur - Sightseeing", "Jaipur - Shopping", and so on for all cities.

Hint: Loop through cities in the outer loop, and activities in the inner loop, printing both together for each pair.
