

100 Days of Python

Day 16 — Practice Assignment: The while Loop in Python

1. Using a while loop, print numbers from 1 to 10.

Hint: Start a counter at 1, print it inside the loop, then increase it by 1 each time until it goes past 10.

2. Using a while loop, print the multiplication table of 5, from 5 x 1 to 5 x 10.

3. Using a while loop, keep asking the user to enter a number until they enter 0. Print each number they enter (except 0), and stop the loop as soon as 0 is entered.

Hint: Use input() inside the loop, convert it to int(), and check the condition with while number != 0.

4. You are building a simple travel planner. A traveller has savings = 2000 and needs 10000 to afford a trip. Assume they save an extra 1500 every month. Using a while loop, print how much they have saved at the end of each month until their savings reach or cross 10000, and finally print the total number of months it took.

Hint: Keep a month counter that increases by 1 each loop, and update savings by adding 1500 each time before checking the condition again.
